About FRQnet

As of July 20, 2017, members of the scientific community who want to transact with the Fonds de recherche du Québec will be able to do so through FRQnet, a new integrated scholarship and grant management system that is common to the three agencies (Nature et technologies, Santé and Société et culture). FRQnet aims to ensure the harmonization, technological updating and simplification of the FRQ's competition processes and administrative follow-ups, to everyone's benefit.

The system manages every step from the submission of applications for funding through the evaluation and grant awarding processes, as well as program impact assessment for the three Fonds de recherche du Québec.

The 2019–2020 competitions in full swing!

Montreal, October 18, 2018 – Several months ago, the Fonds de recherche du Québec initiated the annual cycle of their awards and grants management activities. A significant number of applications have already been filed or are pending submission. Of course, the rise in the number of applications as compared to last year is a clear sign of the research community's interest in our funding programs.

But the major influx of system users can sometimes cause slowdowns in the e-portfolios and the institutions portal when an approval is required. The performance of the FRQnet software package remains one of our most pressing issues, and a number of measures were set in motion in recent days to mitigate the impacts of the deadlines on refresh latency. Additional improvements will be made throughout the year.

Institutions portal

The **2017–2018 financial reports** have been available in the institutions portal since September 27. Note that the deadline to file and approve the reports is January 31, 2019. All the reference documents on the online financial reports, including the eligible expenses table and XML data transfer file (upon request, April 2019), were revised and shared with the financial services offices of recognized institutions. Once again, we would like to thank you for your valuable collaboration in the implementation of the financial reports module.

In addition, major developments are currently underway in the **statistical reports** section of the portal. Indeed, it is now possible to export .xlsx reports to detail current operations, including semester enrolment confirmations and financial reports according to status. We have made these options available in response to certain follow up data needs expressed by liaison officers and members of research and financial services offices.

Other functional improvements are also planned for the **multicriteria search** section and should be in operation by March 2019.

A year focused on consolidating our processes

Since continuous improvement remains our priority, we are pursuing our efforts to consolidate and simplify our business processes with the implementation of FRQnet and our process flows, from the launch of our forms to the awarding of funding in spring 2019.

Finally, future communications on FRQnet will be tailored to target audiences. More general communications on the system will be sent out as needed.
